## **Functions:**

# Collecting and archiving data of adhesive, samples and components:

Capturing via online-connection to scale, barcode, digital camera and keyboard resp. interface to delamination *easyQ-DLA*.

## Testing

Collecting and archiving of test data as e.g. sample-weight, process of watering and drying, interpretation of delamination. Picture documentation of samples.

Test stand for interpretation and documentation of delamination samples

#### Reports

Extensive reports as single report, accumulative report over freely definable period (Shift/day/week). Customer reports etc.

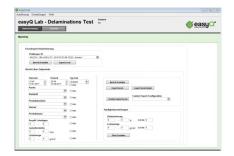

Export possibility to Excel.

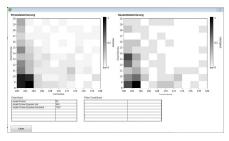

3D- Histogram for single- and total delamination in dependency of adhesive amount.

Future versions will include more value pairs, e.g. surface roughness - delamination.

Data management in SQL-database.

All working processes are as far as possible automated. Interpretation of delamination under support of image processing.

Report over time-period

# Future:

Future software-versions will cover step by step the complete spectrum of tests within the glued timber industry:

- Shear test / Bending test
- Control of mixture-ratio of glue / hardener and applied volume of glue in finger-jointing / layer-press.
- Electronic "Leimbuch" (production documentation) finger-jointing / layer-press.
- Moisture measurement / climate diagram / kiln samples
- QMH -

# easyQ M Lab Simply checked! Don't leave anything to chance!
